

Thai Biodiesel Industry in ASEAN: Opportunities or Threats

Current Biodiesel Standards*

Nuwong CHOLLACOOP, Ph.D.

Head, Bioenergy Lab

National Metal and Materials Technology Center (MTEC)

nuwongc@mtec.or.th

*Chollacoop, "Seminar-cum-Roundtable Discussion on Biofuels Standards for Lao PDR", ADB TA7679: Promoting Renewable Energy, Clean Fuels and Energy Efficiency in the Greater Mekong Subregion, 15-16 May 2012, Vientiane, Lao PDR

NSTDA Annual Conference 2013 (NAC2013)

Monday 1 April 2013 (9:00 – 12:00hr)

Convention Center room CC-305, Thailand Science Park, Pathumthani

Outline

- Comparison of various biodiesel standards
 - US: ASTM / EU: EN / Japan: JIS
 - Others including ASEAN
- Issues
 - Feedstock / Method / Parameter range
 - Harmonization?
- Current initiatives on harmonization
 - EN → already successful
 - APEC (Asia Pacific Economic Cooperation)
 - TriPartite (Brazil, EU, US)
 - WWFC (Worldwide Fuel Charter)
 - EAS (East Asian Summit)
 - AAF (Asean Automotive Federation)
- Lesson learned and common ground
 - Difficult to enforce mandatory specification like EU
 - Even mutual agreement on voluntary basis still difficult
 - ✓ Oxidation stability
 - ✓ Blend limit
 - Could be used as
 - ✓ Bargaining power from the region
 - ✓ Non-tariff barrier

Comparison of various BDF standards

American (1)

Table 2: Comparison of biodiesel (blends) in American region

Parameter	CEN	ASTM B10	ASTM B20	Brazil	Argentina	Colombia	Paraguay	Uruguay
	EN 14214 B100	D 6751 Blend	D xxxx:2004 B20	ANP N° 42 B100	IRAM 6515-13 B100	DE 100-04 B100	PNA 16 018 B100	UNI 1100 B100

Issues

- Feedstock affecting properties
 - US, Brazil: soybean
 - EU: rapeseed
 - Indonesia, Malaysia, Thailand: Palm
 - Philippines: Coconut
 - China, Japan, Korea: Used cooking oil
 - Australia, New Zealand: Beef tallow
 - Vietnam: Cat fish fat
 - India: Jatropha?
- Method for measuring properties
- Range of properties
- Harmonization?

Establishment of the Guidelines for the Development of Biodiesel Standards in the APEC Region

EWG 02/2007A

APEC 21st Century Renewable Energy Development Initiative (Collaborative IX)
November 2007

Final Report Presented to:

Asia Pacific Economic Cooperation
Energy Working Group

Submitted by:

Hart Energy Consulting

Asia-Pacific Economic Cooperation

Guidelines for the Development of Biodiesel Standards • All rights reserved • Hart Energy Consulting

Under APEC 21st Century Renewable Energy Development Initiative (Collaborative IX),

- Energy Working Group formulate Expert Group on New and Renewable Energy Technologies (EGNRET) under EWG 02/2007A to establish guideline for common BDF standard

EWG 02/2007A, Establishment of the Guidelines for the Development of Biodiesel Standards in the APEC Region (2007),

http://www.biofuels.apec.org/pdfs/ewg_biodiesel_standards.pdf

APEC Harmonization Approach

- Requiring diesel blends that contain biodiesel to comply with:
 - Applicable diesel specification – what extent are APEC or national or global diesel specs aligned.
 - Applicable biodiesel specifications, possibly with certain waivers provided to enable use of varying biodiesels, at varying treat rates; and
 - A new biodiesel blend standard – comply with the EN 14214 and ASTM D6751 standards?
- Establishing a B100 standard that can:
 - Ensure successful use in the market as B100.
 - Ensure a satisfactory product when blended with on specification mineral diesel.
 - Provide a biodiesel blend component that meets an agreed quality standard and has known characteristics

APEC (1)

Table 12: APEC Biodiesel Quality Standard and Harmonization Initiative

	ASTM D6751	EN 14214	Typical APEC Economy	Discussion & Conclusions		ASTM D6751	EN 14214	Typical APEC Economy	Discussion & Conclusions
Regulatory and Emissions									
Max Sulfur (ppm)	15 / 500	10	10 - 500	Regulatory requirement per economy Buyer-seller specified		Max phosphorus ppm	10	10	10 China no spec Agreed
Min Flash Point (°C)	130 / 93.1	120	93 - 130	For non-hazardous classification in U.S. min of 93°C is required. To show methanol controlled certify at >130°C		Max Alkali metals (Na + K), ppm	5	5	No spec, report, 5 Depends on after-treatment
Max T90 Distillation (°C)	360	-	The Philippines, Australia Indonesia @ 360 °C	Other (performance) tests control contaminants Biodiesel reduces PM and HC emissions so test not required for emissions reasons		Max Ca + Mg, ppm	5	5	No spec, report or 5 Depends on after treatment
Engine and Aftertreatment Performance									
Cetane Number	47	51	47 - 51	Higher than 47 (EN) is required for emissions. This is based on diesel tests, so not necessarily applicable to biodiesel. Higher minimum ambient temperatures reduce start-up emissions. Blending not necessarily linear Additives can be used		Max CCR 10%, wt%	-	0.3	0.1 – 0.3 The Philippines no spec Difficult for biodiesel to fractionate 10 %, so not recommended.
Min-Max Density @15 °C, kg/m³	-	860 – 900	820 - 900	Agreement		Max CCR 100%, wt%	0.05	-	Korea, Chinese Taipei, Thailand, Japan, China =no spec Recommended to use
Min-Max Viscosity @ 40 °C, cSt	1.9 – 6.0	3.5 – 5.0	1.9 – 3.5 min 4.5 – 6.0 max	Coconut below 3.5, and tallow and palm can exceed 5 Requirement should be for the final blend		Max water and sediment , vol%	0.05	-	Japan, NZ, Chinese Taipei, Thailand, China =no spec Agreed to replace by separate testing
						Max water, ppm	-	500	Australia, Indonesia, The Philippines, Korea = no spec Agreed
						Max Ash, wt%	0.02	0.02	0.01 – 0.02 Agreed at 0.02 May reduce later
						Total Contamination, ppm	-	24	China, Indonesia, The Philippines, Korea = no spec Agreed

APEC (2)

	ASTM D6751	EN 14214	Typical APEC Economy	Discussion & Conclusions
Max Cu corrosion, 3 hr at 50 °C	3	1	1 Indonesia, The Philippines = 3	Needs further work for alignment. In practice biodiesel complies easily
Max Methanol content, wt%	0.2	0.2	China, The Philippines = no spec	Agreed
Max free glycerine, wt%	0.02	0.02	Korea = no spec	Agreed
Min oxidation stability @ 110 °C, hrs	3	6	No spec, 3 or 6 Japan = 10	Needs further work
Max total glycerin, wt%	0.24	0.25	0.24 – 0.25	Agreed and 0.24 recommended
Indirect (Derived) Usability and/or Durability				
Min Ester Content	-	96.5	China, The Philippines, US = No spec	Method developed for RME, so does not show lower molecular weight from CME
Max non-ester	-	None except additives	No spec	Agreed to exclude
Max acid value	0.5	0.5	0.5 – 0.8	Simple test. Agreed to include. Limit not agreed.
Max glycerides – mono, di, tri	-	0.8; 0.2;	No spec	No agreement. Prefer direct tests of performance
Max linolenic acid methyl ester	-	12	Australia, China, Indonesia, The Philippines, Korea, U.S. = No spec	Limits certain feedstocks with no clear reason. No agreement. Prefer direct tests of performance
Max polyunsaturated methyl ester	-	1	No Spec, Chinese Taipei = 1	No agreement. Prefer direct tests of performance

	ASTM D6751	EN 14214	Typical APEC Economy	Discussion & Conclusions
Max iodine number	-	120	115 - 120 Australia, China, The Philippines, Korea, U.S. = No spec	Limits certain feedstocks without certain reason. Max limit of 130 preferred. No agreement. Prefer direct tests of performance
Mandated detergents & additives	-	-	-	No agreement. Further discussion required

Remarks

- Lesson learned
 - Difficult to get consensus agreement
 - Imply limited biodiesel trade between economies
 - Wide range of emission regulation among APEC members make harmonization difficult (e.g. Sulfur & Phosphorous)
 - Data testing with mostly RME, SME and PME on Euro 0 to 2 vehicles
- Future work
 - conduct an assessment of testing facilities and laboratories in member economies.;
 - establish accredited test facilities for round-robin testing between APEC economies;
 - review all available test data for feedstock dependant variables, and identify further research work required in support of performance based specifications;

- Brazil, EU & US started TriPartite Task Force
 - In 2006, Govt of Brazil, EU & US discussed on international trade in biofuel, which would require internationally recognized standard
 - In Feb 2007, conference organized by CEN with US National Institute of Standards and Technology (NIST) and Brazil National Institute of Metrology, Standardization, and Industrial Quality (INMETRO) to discuss on potential barrier from different standard
 - Publish ‘white paper on internationally compatible biofuel standards’ in Dec 2007
- Classification of biofuel properties
 - Category A: specifications that are already similar;
 - Category B: specifications with significant differences between parameters and methods, but which might be aligned by work on documentary standards and measurement standards; and
 - Category C: specifications with fundamental differences, perhaps due to emissions or environmental regulations within one or more regions, which are not deemed bridgeable in the foreseeable future

Classification of BDF Properties

Category A <i>similar</i>	Category B <i>significant differences</i>	Category C <i>fundamental differences</i>
sulfated ash	total glycerol content	sulfur content
alkali and alkaline earth metal content	phosphorus content	cold climate operability
free glycerol content	carbon residue	cetane number
copper strip corrosion	ester content	oxidation stability
methanol & ethanol content	distillation temperature	mono, di-, tri-acylglycerides
acid number	flash point	density
	total contamination	kinematic viscosity
	water content & sediment	iodine number
		linolenic acid content
		polyunsaturated methyl ester

Rating of Alignment

- A = easily done,
B = feasible with effort,
C = not feasible at the present
- Order:
BR / EU / US

Category A Parameters Misalignment Impact (MI)	Category B Parameters Misalignment Impact (MI)	Category C Parameters Misalignment Impact (MI)
Sulfated ash (A / A / A) MI: very minor	Total glycerol (A / A / A) for limit value (B / B / B) for method MI: minor	Sulfur content (C / C / C) MI: medium to major
Alkali & alkaline earth metals (A / A / A) MI: very minor	Phosphorus content (A / B / A) MI: medium	Cold climate operability (C / C / C) MI: very minor
Free glycerol (A / B / A) MI: minor	Carbon residue (B / B / B) MI: very minor	Cetane number (C / C / C) MI: major
Copper strip corrosion (A / A / B) MI: none	Ester content (B / B / B) MI: very minor	Oxidation stability (B / C / C) MI: medium
Methanol & ethanol content (A / A / A) MI: medium	Distillation temperature (B / B / B) MI: very minor	Mono, di-, tri-acylglycerides (B / B / C) MI: minor
Acid number (A / B / A) MI: very minor	Flash point (B / B / B) MI: minor	Density (C / C / C) MI: very minor
	Total contamination (B / B / B) MI: minor	Kinematic viscosity (C / C / C) MI: very minor
	Water content & sediment (B / B / B) MI: medium/major	Iodine number (A / C / A) MI: major
		Linolenic acid (A / C / A) MI: major
		Polyunsaturated methyl ester (C / C / C) MI: major

Definition of Fuel Properties

- **Category 1** fuels represent the lowest quality and can be found in markets with no or first level of emission control.
 - A category 1 diesel fuel is characterized by a cetane number of min. 48.0 and a sulfur content of max. 3000 mg/kg.
- **Category 2** fuels represent an improved quality level and can be found in markets with stringent requirements for emission control (e.g. US Tier 0 or 1, EURO 1 and 2). **Could allow up to 5% blend**
 - A category 2 diesel fuel is characterized e.g. by a cetane number of min. 53.0 and a sulfur content of max. 300 mg/kg.
- **Category 3** fuels represent a further improved quality and can be found in markets with advanced requirements for emission control (e.g. US California LEV, ULEV and EURO 3 and 4).
 - A category 3 diesel fuel is characterized by e.g. a cetane number of min. 55 and a Sulfur content of max. 30 mg/kg.
- **Category 4** fuels represent further advanced requirements for emission control, to enable sophisticated NOx and PM after-treatment technologies (e.g. US California LEV-II, US EPA Tier 2, EURO 4 in conjunction with increased fuel efficiency constraints).
 - A category 4 diesel fuel is characterized by a sulfur content of max. 10 mg/kg.

Summary of Guidelines

Property	Value	Units	Test Methods
Ester content	96.5 min	% m/m	EN 14103 mod Other: ABNT NBR 15342
Linolenic Acid Methyl Ester	12.0 max	% m/m	EN 14103 mod
Polyunsaturated acid methyl ester (≥ 4 double bonds)	1 max	% m/m	prEN 15779
Oxidation Stability: Induction Period	10 min	hr	prEN 15751 or EN 14112 as alternative
Iodine Number	130 max ¹	g I ₂ /100 g	EN 14111 ISO 6618 ASTM D664, D974 JIS K2501 Other: ABNT NBR 14448
Total Acid Number	0.5 max	mg KOH/g	EN 14110 JIS K2536 Other: ABNT NBR 15343
Methanol	0.20 max	% m/m	EN 14105 EN 14105 ASTM D6584 Other: ABNT NBR 15342
Glycerides			EN 14105 EN 14105
Mono-glyceride	0.80 max	% m/m	EN 14105 ASTM D6584 Other: ABNT NBR 15342
Di-glyceride	0.20 max	% m/m	EN 14105 ASTM D6584 Other: ABNT NBR 15342
Tri-glyceride	0.20 max	% m/m	EN 14105 ASTM D6584 Other: ABNT NBR 15342
Glycerin (glycerol)			EN 14105/14106 ASTM D6584 Other: ABNT NBR 15341
Free glycerin	0.02 max	% m/m	EN 14105 ASTM D6584 Other: ABNT NBR 15341
Total glycerin	0.25 max	% m/m	EN 14105 ASTM D6584 Other: ABNT NBR 15344
Density	report	g/ml	EN ISO 3675 ASTM D4052 JIS K2249 Other: EN ISO 12185, ABNT NBR 7148/14065
Kinematic Viscosity@40°C	2.0 - 5.0 ²	mm ² /s	EN ISO 3104 ASTMD445 JIS K2283

¹ This limit may unnecessarily preclude certain feedstocks. Some engine technologies may need a more stringent limit.

² For temperatures at or below -20°C, viscosity should be at or below 48 mm²/s to avoid potentially dangerous loads on the fuel injection pump drive system.

Guideline Summary (1)

- %ME, Linolenic acid ME, Polyunsat. acid ME → fuel filter plugging by sludge
- Oxidation stability → peroxide damages part & acid corrodes
- Iodine number → no. of double bond as indicator for oxidation stability
- TAN → acid from process or degradation could harm injection system & metal parts
- Methanol → lower flash point, decrease lubricity, corrode injector
- Mono/di/tri-glycerine & Free/total glycerin → filter plugging, injector deposit; settling glycerin at tank bottom can attract polar compound (water)

Summary of Guidelines

Property	Value	Units	Test Methods
Ester content	96.5 min	% m/m	EN 14103 mod Other: ABNT NBR 15342
Linolenic Acid Methyl Ester	12.0 max	% m/m	EN 14103 mod
Polyunsaturated acid methyl ester (≥ 4 double bonds)	1 max	% m/m	prEN 15779
Oxidation Stability: Induction Period	10 min	hr	prEN 15751 or EN 14112 as alternative
Iodine Number	130 max ¹	g I ₂ /100 g	EN 14111 ISO 6618 ASTM D664, D974 JIS K2501 Other: ABNT NBR 14448
Total Acid Number	0.5 max	mg KOH/g	EN 14110 JIS K2536 Other: ABNT NBR 15343
Methanol	0.20 max	% m/m	EN 14105
Glycerides			EN 14105
Mono-glyceride	0.80 max	% m/m	ASTM D6584 Other: ABNT NBR 15342
Di-glyceride	0.20 max	% m/m	EN 14105 ASTM D6584 Other: ABNT NBR 15342
Tri-glyceride	0.20 max	% m/m	EN 14105 ASTM D6584 Other: ABNT NBR 15342
Glycerin (glycerol)			EN 14105/14106
Free glycerin	0.02 max	% m/m	ASTM D6584 Other: ABNT NBR 15341
Total glycerin	0.25 max	% m/m	EN 14105 ASTM D6584 Other: ABNT NBR 15344
Density	report	g/ml	EN ISO 3675 ASTM D4052 JIS K2249 Other: EN ISO 12185, ABNT NBR 7148/14065
Kinematic Viscosity@40°C	2.0 - 5.0 ²	mm ² /s	EN ISO 3104 ASTMD445 JIS K2283

¹ This limit may unnecessarily preclude certain feedstocks. Some engine technologies may need a more stringent limit.

² For temperatures at or below -20°C, viscosity should be at or below 48 mm²/s to avoid potentially dangerous loads on the fuel injection pump drive system.

Guideline Summary (2)

- Density → used as indicator of contamination by unwanted compounds
- Kinematic viscosity → injector lubrication & fuel atomization

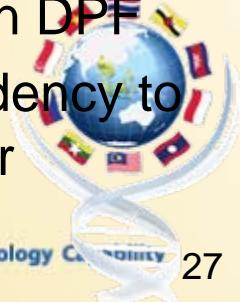

Guideline Summary (3)

MTEC
a member of NSTDA

Property	Value	Units	Test Methods
Flash Point	100 min	°C	Other: ABNT NBR 10441 ISO 3679 ASTM D93
Cetane Number	51 min		ISO 5165 ASTM D613 JIS K2280
Water	500 max	mg/kg (ppm)	EN 12937
Water and Sediment	0.05 max	% v/v	ASTM D2709
Total Contamination	24 max	mg/kg	EN 12662 ASTM D2276, D5452, D6217
Ash Content	0.001 max	% m/m	ISO 6245 ASTM D482 JIS K2272
Sulfated Ash	0.005 max	% m/m	ISO 3987 ASTM D874 Other: ABNT NBR 984
Carbon Residue: Ramsbottom, on 100% distillation residue	0.05 max	% m/m	ASTM D4530
Corrosion: Ferrous	light rusting, max	Rating	ASTM D665 Procedure A
Sulfur	10 max	ppm	EN 20846/20884 ASTM D5453/D2622 JIS K3541-1, -2, -6 or -7
Phosphorus	4 max	mg/kg	EN 14107 ASTM D4951, D3231
Alkali metals (Na+K)	5 max	mg/kg	EN 14108/14109, EN 14538
Alkaline metals (Ca+Mg)	5 max	mg/kg	EN 14538
Trace Metals	no addition		ASTM D7111

- Flash point → safety handling (storage & transport), also indicator for methanol contamination
- Cetane → too low cetane causes hard starting, rough operation & increased smoke
- Water/Water and sediment/ Total contamination → water ↑ oxidation & corrosivity, promote microbial growth, filter plugging
- Ash content/Sulfate ash → measure of metal/inorganic contaminant, engine deposit, filter plugging & shorten DPF
- Carbon residue → tendency to form deposit on injector

Guideline Summary (4)

MTEC
a member of NSTDA

Property	Value	Units	Test Methods
			Other: ABNT NBR 10441
Flash Point	100 min	°C	ISO 3679 ASTM D93
			ISO 5165
Cetane Number	51 min		ASTM D613 JIS K2280
Water	500 max	mg/kg (ppm)	EN 12937
Water and Sediment	0.05 max	% v/v	ASTM D2709
Total Contamination	24 max	mg/kg	EN 12662 ASTM D2276, D5452, D6217
Ash Content	0.001 max	% m/m	ISO 6245 ASTM D482 JIS K2272
Sulfated Ash	0.005 max	% m/m	ISO 3987 ASTM D874 Other: ABNT NBR 984
Carbon Residue: Ramsbottom, on 100% distillation residue	0.05 max	% m/m	ASTM D4530
Corrosion: Ferrous	light rusting, max	Rating	ASTM D665 Procedure A
Sulfur	10 max	ppm	EN 20846/20884 ASTM D5453/D2622 JIS K3541-1, -2, -6 or -7
Phosphorus	4 max	mg/kg	EN 14107 ASTM D4951, D3231
Alkali metals (Na+K)	5 max	mg/kg	EN 14108/14109, EN 14538
Alkaline metals (Ca+Mg)	5 max	mg/kg	EN 14538
Trace Metals	no addition		ASTM D7111

- Corrosion → metal compatibility
- Sulfur → compatibility with emission control system
- Phosphorous → could come from fertilizer or natural phospholipid, which affect emission control system
- Group I&II metals → residual metals form deposit. Possible ash formation by Na&K
- Trace elements → no metal or other contaminants

(*) 130deg.C of flashpoint is available instead of measuring methanol content (**) Meet diesel oil specification (***) Need data check and further discussion (****) Need more data & discussion from 6 to 10 hrs.

Output of the Activity in 2008/2009 onwards

ERIA Biodiesel Fuel Trade Handbook -1st edition for comments with subsequent update-

1. Introduction
2. Energy Situation in the World
3. Biodiesel Fuel Standardization Activities
4. Biodiesel Fuel Quality
5. Potential of Other Sustainable Feedstocks
6. Importance of Quality Control and Market Acceptance
7. Current Status of Biodiesel Fuel in East-Asian Countries
8. Trade and Market Dynamics of Biodiesel Fuel
9. Future Vision

Biodiesel Fuel Trade Handbook

(The First Edition for Comments)

July 2009

Edited by ERIA Research Project Working Group on

"Benchmarking of Biodiesel Fuel Standardization in East Asia"

- History
 - ASEAN Automotive Federation (AAF) was first established in 1976, but activities ceased in 1983 (each focus on national auto industry)
 - In 1996 with the implementation of AFTA and its schemes, the ASEAN Automotive Federation was revived as a common platform to work with ASEAN Governments and ASEAN Secretariat towards achieving AFTA.
- Vision
 - “ASEAN with a strong and integrated vehicle and parts & components market supported by globally competitive automotive manufacturing industry”.
- Mission
 - “To promote automotive market integration and growth, cooperation and investments in the ASEAN region”.
- Goal
 - “To increase ASEAN market share and industry capability in the global automotive business”.

Lesson learned and common ground

- Difficult to enforce mandatory specification like EU
- Even mutual agreement on voluntary basis still difficult
 - Oxidation stability
 - Blend limit
- Could be used as
 - Bargaining power from the region
 - Non-tariff barrier

Thank you very much
